- Guarantee conformity with the WCO SAFE framework of standards
- Speed up clearance process
- Enhance security

INNOVATIVE SOLUTIONS FOR CUSTOMS MODERNIZATION AND TRADE FACILITATION

Post Clearance Verification Services (PCVS) are designed to support Customs authorities in the implementation of the Kyoto convention and the WCO SAFE Framework of Standards related to risk management and trade facilitation, by providing capacity building and verification services at a post clearance stage.

Cotecna PCVS is powered by ValueQuest®, a comprehensive and customizable system designed to verify the accuracy of the declared value of goods and CRMS® (Computerized Risk Management System), an innovative solution that analyses trade transactions to recommend the appropriate level of intervention.

PCVS contribute to build up a reliable valuation database and encourage the implementation of standards and best practices by delivering training, capacity building and technology transfer.

PCVS are fully integrated into the Customs environment to ensure a maximum compatibility with the Customs Management Systems and interoperability with external programs.
